

Assignment 08

Title: File transfer using UDP.

Problem Statement: Write a program using UDP sockets to enable file transfer (script, txt, audio, video file) between two machines.

Prerequisite:

UDP protocol (Transport layer)
socket programming in python.

S/W, H/W Requirements:

Windows 10, 64 bit (4GB, 512 GB SSD)

python 3.9, vscode editor

Theory:

server-client file transfer using UDP
server

In this assignment we will send file from client to the server. We will read bytes from file at client and send it to server where server will write those bytes to a file. We will continue this until the whole file is sent.

Server :

1. create a UDP socket
2. bind the socket with address, port
3. listen to requests
4. accept incoming requests
5. Run loop
 1. receive bytes from client
 2. write bytes to file
 3. if bytes are not present : end loop
6. close server

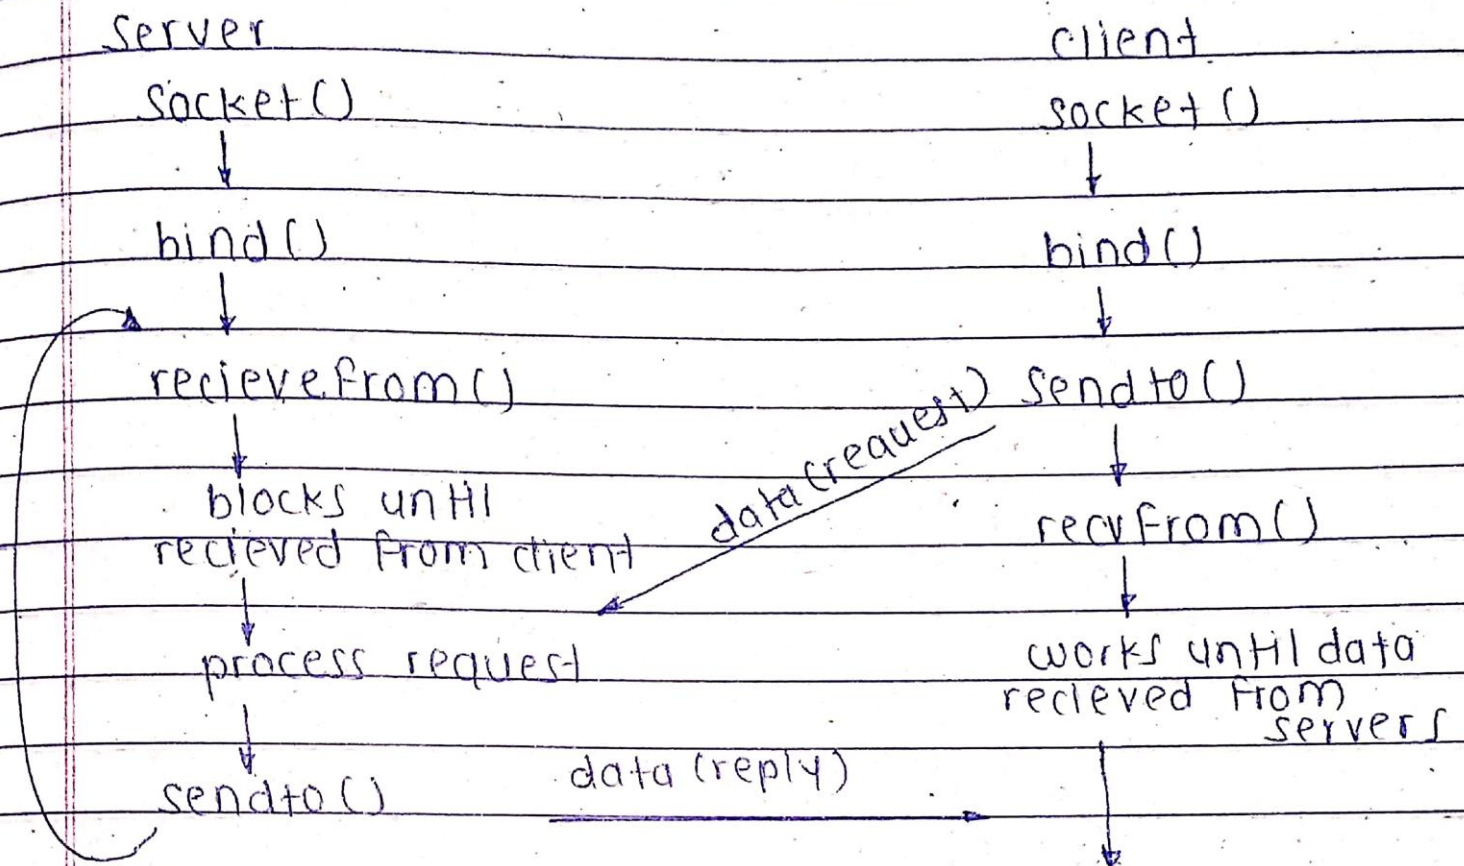

Client :

1. create a UDP socket
2. connect to address, port of server
3. Run loop
 1. Read from file
 2. IF nothing to read end loop
 3. send bytes to server
4. close connection

Testing :

Run Wireshark tool
Run client-server program
send and receive file
Capture UDP packets in Wireshark.

Diagram:

Conclusion:

Successfully implemented and performed file transfer using UDP socket programming.
